WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The models have come in a little more bullish for lightning tonight and once again Sunday into Sunday night. Decided to expand the High Risk into the Far Eastside for tonight favoring Modoc and Lassen counties. Much of the Northern Sierra has a lightning threat into tonight but cells should be a tad wetter or slower to move. High Risk may need to be expanded into Sunday and Sunday night across the far north. Will be monitoring. Outflow winds and the Delta Breeze will be the main wind driver the next few days and surface humidity should incrementally trend higher. Temperatures will generally remain 5 to 12 degrees above normal through the weekend thus HOT!

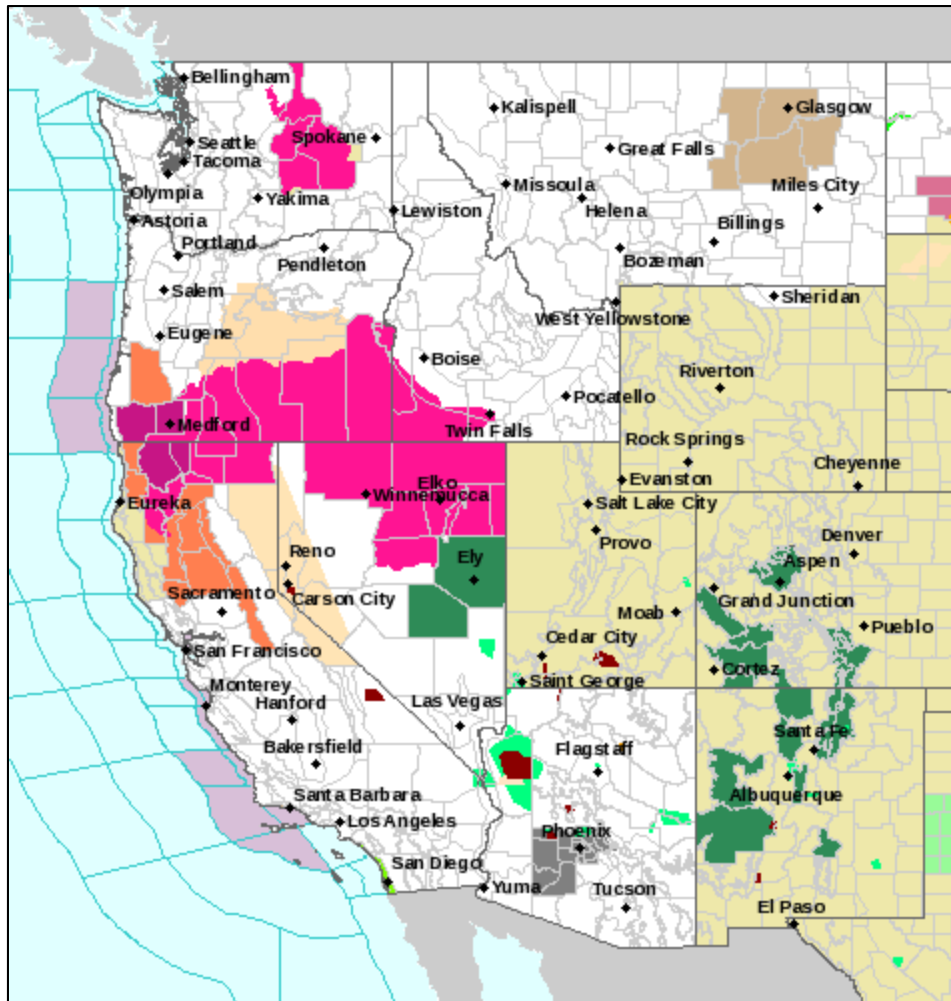

The heat wave will continue through next week with readings averaging 5 to 15 degrees above normal. The dominant high pressure heat dome should shift slightly over the Great Basin during the latter half of next week and allow another surge of Monsoon moisture to move northward over the region. Way too early to determine lightning impacts but there is the possibility.

SOUTHERN CALIFORNIA

Isolated wet afternoon showers and thunderstorms will form over the Sierra and over the mountains and higher desert locations of Southern California east of the Cajon Pass through this weekend. Thunderstorm activity will increase over the mountains and deserts Monday through the end of next week as the center of the high moves eastward over the Great Basin. A weak disturbance in the flow around the high pressure area, may bring shower and thunderstorm activity to the coastal and valley locations of Southern California toward the middle of next week.

Temperatures will be near to a little above normal through the end of next week, with 80s to low 90s across the mountains and 90s to 102 in the valleys. Minimum humidity will be mainly between 20% and 40% through the end of next week. However, across Central California west of the Sierra, minimum humidity will be mainly in the teens starting Sunday. Winds will be light through the end of next week, except there will be strong and erratic winds in and near any thunderstorm.
